

PRODUCT DATA SHEET

AIR DRYER FILTERS

A spin on air dryer filter designed for Wabco style air brake systems.

Air brakes have significantly improved the safety of braking systems in modern trucks and trailers. However, correct maintenance of all components of the braking system is of critical importance.

The air dryer is one of these components. Once air leaves the compressor it passes through the air dryer. The purpose of the air dryer is to remove impurities (water and/or oil vapours) before they reach the air tanks and valves.

The air dryer filter retains the moisture by the contents of the filter (either desiccant or coalescing). Moisture that condenses out also collects at the base of the dryer. When the compressor unloads water is expelled and dried air flows back through the system drying the filter contents.

In normal operating conditions, with correct brake system maintenance, the air dryer filter has a life expectancy of 2 years.

PRODUCT SNAPSHOT

Z925 is a desiccant type spin on air dryer filter designed for Wabco style air brake systems. Designed to trap water for vehicles with low oil contamination.

Interchangeable with:	Air Dryer Filter
Wabco: 4324102227	Height (OA): 165mm
4324100202	Body Diameter: 140mm
Fleetguard: AF27817	Thread: M39x1.5
Donaldson: P781466	
Baldwin: BA5374	
MAN 81521086001	
Mercedes Benz 4300969	
Iveco 2992261	

PRODUCT SNAPSHOT

Z1059 is a coalescing filter that not only traps water but also provides separation of oil to reduce contamination.

Interchangeable with:	Air Dryer Filter
Wabco: 4329012232	Height (OA): 165mm
Fleetguard: AD27747	Body Diameter: 140mm
Donaldson: P951413	Thread: M39x1.5
Baldwin: BA5379	
Volvo: 20557234	
MAN 81521086025	
81521550042	
Mercedes Benz 8840483382
