FITTING INSTRUCTIONS FOR RYCO CABIN FILTER RCA194MS
HOLDEN CAPTIVA (CG) SERIES I & SERIES II

1. Filter is located behind glove box. Remove glove box to access cabin filter housing.
   A regular size Phillips screwdriver and a small flat head screw driver will be required to perform the job.

2. Remove the bottom screws of the glove box as indicated.

3. Once bottom screws are removed proceed to open glove box and remove the top screws as indicated on the image. Then gently pull the glove box out until connectors are seen.

4. Remove the top connector first by gently pulling it. Then tilt forward glove box to reach for rear connector. You may need a small flat head screw driver to release.
   Once glove box is out of the way it will be very easy to identify cabin air filter housing.

5. Identify cabin air filter housing which will be sitting on top of air blower. Proceed by removing screw on housing lid and remove to access filter.
   Remove filter and clean housing of any dirt or leaves.

6. Replace cabin air filter by inserting it in the right air flow direction as indicated. See filter frame to identify direction in which filter has to be fitted. Refit all previously removed components in reverse order.
