The cabin air filter is located in the footwell area against the centre console as indicated in the pic.

Move protective foam out of the way and proceed to release the cabin air filter housing lid by pressing clip as indicated on the picture.

Filter comes in two pieces. Slide out the bottom one and then the top one.

Note how the old filter was fitted and pay attention to air flow direction and organize the Ryco filters the same way.

Slide the top Ryco filter first and push it upwards. If placed properly it should stay up by itself, then slide bottom one. Push in gently both filters until it clicks in. The housing lid will then easily fit back. The lid won’t secure until filters are in the right position.
