

## INSTALLATION INSTRUCTIONS TO REPLACE ORIGINAL MITSUBISHI PETROL FILTER ASSEMBLY ON MITSUBISHI MAGNA AND CORDIA WITH FIREWALL TYPE MOUNTING

- Disconnect wire band type hose clip from firewall mounted filter and remove inlet and outlet hose. Pull the original equipment petrol filter its mounting clip or bracket.
- Remove mounting clip / bracket from firewall by removing threaded mounting bolt (see exploded diagram above) NOTE: Retain bolt, lock washer and metal reinforcing washer so that these may be reassembled to the new mounting clip included in the Z174K kit.
- Position bolt, lock washer, reinforcing washer and the two rubber isolation washers as per exploded diagram above. Reposition mounting clip / bracket to engine compartment firewall by threaded bolt into tapped nut on firewall.
- Install Ryco Z92 plastic inline filter into retaining clip / bracket with inlet and outlet pipes at the same attitude as the filter previously removed, NOTE: Ensure that the flange on the Z92 filter fits into the mating slot in the clip.
- Reconnect hoses to filter: It is recommended that the original equipment wire hose clips be discarded in favour of the two metal band clamps provided in this kit. wire clamps while secure, in time have a tendency to damage the fuel delivery hoses and are not necessary for sealing with the Z92 filter; the band type clip provides quite adequate retention properties for this filter
- Start engine and check for leaks, Future petrol filter replacements require only the use of normal Z92 filter
